Lab Title: Reconstructing Chrome Web History

Student Name: Samuel Chinedu Onu

Student ID: 2025/FWSD/11518

Course Name: SBT-DF204: Computer Forensics Case Studies

Instructor Name: Aminu Ibrahim Jalo

Date of Submission: 12th October 2026

Computer Forensics Case Studies

Case Study 2 Reconstructing Chrome Web History

Student Assessment Brief

Assessment detail	Information
Course	SBT-DF204 Computer Forensics Case Studies
Assessment	Case Study 2 Individual browser history investigation
Case title	Reconstructing Suspected Drug Trafficking From Chrome Web History
Submission format	Written report with SQL evidence, screenshots, timeline, and evidence log
Deadline and maximum score	As published in E-Campus

This individual case study asks you to examine a Chrome History SQLite database and reconstruct an evidence-based timeline of suspected drug trafficking activity. You will identify meaningful browser records, convert timestamps, examine navigation transitions, and connect observations across postings, communications, payment references, and downloads. Your report must distinguish what the browser history directly records from what you infer about the user or alleged activity.

Case scenario

Investigators received a Google Chrome History file from a device associated with a suspect. The case hypothesis states that the browser may have been used to advertise controlled drugs, communicate with an interested buyer, exchange payment information, verify a cryptocurrency transaction, and retain proof of payment. Your task is to assess the available history evidence and construct a defensible timeline. The case requires forensic interpretation of a supplied database, not interaction with live websites, accounts, messages, or wallets.

Case materials

The supplied case file is a Chrome History SQLite database named **History**. The teaching source shown in the case materials is: added in study material section

Create a working copy before opening the database. Record the source, original file name, file size, and SHA-256 value. Use a SQLite examination tool such as DB Browser for SQLite or sqlite3. Preserve screenshots and SQL output that support your findings.

What you must submit

Item	Required output	What to provide
1	Forensic working copy	Acquire the supplied Chrome History file. Record its source, original file name, byte size, SHA-256 value, and the location of your read-only original and working copy.
2	Database examination	Identify the relevant SQLite tables and their fields. Your report must use the urls, visits, and downloads evidence that applies to your findings.
3	Reconstructed timeline	Build a time-ordered account of the browser activity. Cite visit IDs, URL IDs, timestamps, transition values, titles, URLs, and download record IDs where relevant.

Item	Required output	What to provide
4	Student report	Submit one report in PDF or DOCX format, with SQL output or screenshots, a completed evidence log, and a timeline appendix.

Investigation task

Examine the History database methodically. Base all findings on record IDs, table fields, URLs, titles, timestamps, transitions, and related download artefacts. A URL or title can indicate browser activity, but it may not prove the full content of a page, the person operating the device, or the real-world completion of an alleged transaction. Use the questions below to structure your report.

No	Investigation question	Minimum evidence to discuss
1	What evidence file did you acquire and how did you preserve it?	Report the original file name, source, file size, SHA-256 value, working-copy method, and any file-access precautions.
2	What browser-history tables and fields are relevant?	Identify the tables you examined and explain the role of the urls, visits, downloads, and downloads_url_chains data used in your case.
3	When did the recorded web activity occur?	Convert Chrome WebKit timestamps to UTC and provide the query or method. State any local-time conversion separately.
4	How did the browser reach the material URLs?	Use transition values, transition qualifiers, and from_visit links to distinguish typed or omnibox activity, links, form submissions, redirects, and navigation chains.
5	What web-history evidence relates to the suspected sale or posting?	Identify the records that support or challenge an advertisement, posting workflow, management page, or related interaction. Cite the exact artefacts.
6	What evidence relates to communications and payment activity?	Identify relevant email, image-hosting, blockchain-explorer, exchange, transaction, wallet, or download artefacts. Explain each link without assuming content that the record does not show.
7	What is the reconstructed timeline?	Create a chronological table that separates direct observations from your interpretation of the activity stage.
8	What conclusion can you defend?	Give a cautious conclusion with confidence level and at least three limitations or alternative explanations, including the difference between browser-profile activity and human identity.

Chrome History analysis starting points

Chrome stores WebKit timestamps as microseconds since 1 January 1601 UTC. Use UTC for the main investigation timeline. If you also display local time, state the time zone and conversion. Inspect the schema first because Chrome versions can differ. The following SQL provides suitable starting points, not a substitute for examining the returned records.

Purpose	Starting SQL

List the available tables	`SELECT name`
	`FROM sqlite_master`
	`WHERE type = 'table'`
	`ORDER BY name;`

Inspect a table schema	`PRAGMA table_info(urls);`
	`PRAGMA table_info(visits);`
	`PRAGMA table_info(downloads);`

Purpose	Starting SQL

Build a visit timeline	`SELECT v.id AS visit_id, u.id AS url_id, u.url, u.title,`
	`  datetime(v.visit_time/1000000 + strftime('%s','1601-01-01'),`
	`'unixepoch') AS visit_utc,`
	`  v.from_visit, v.transition, v.visit_duration/1000.0 AS duration_ms`
	`FROM visits AS v JOIN urls AS u ON v.url = u.id`
	`ORDER BY v.visit_time;`

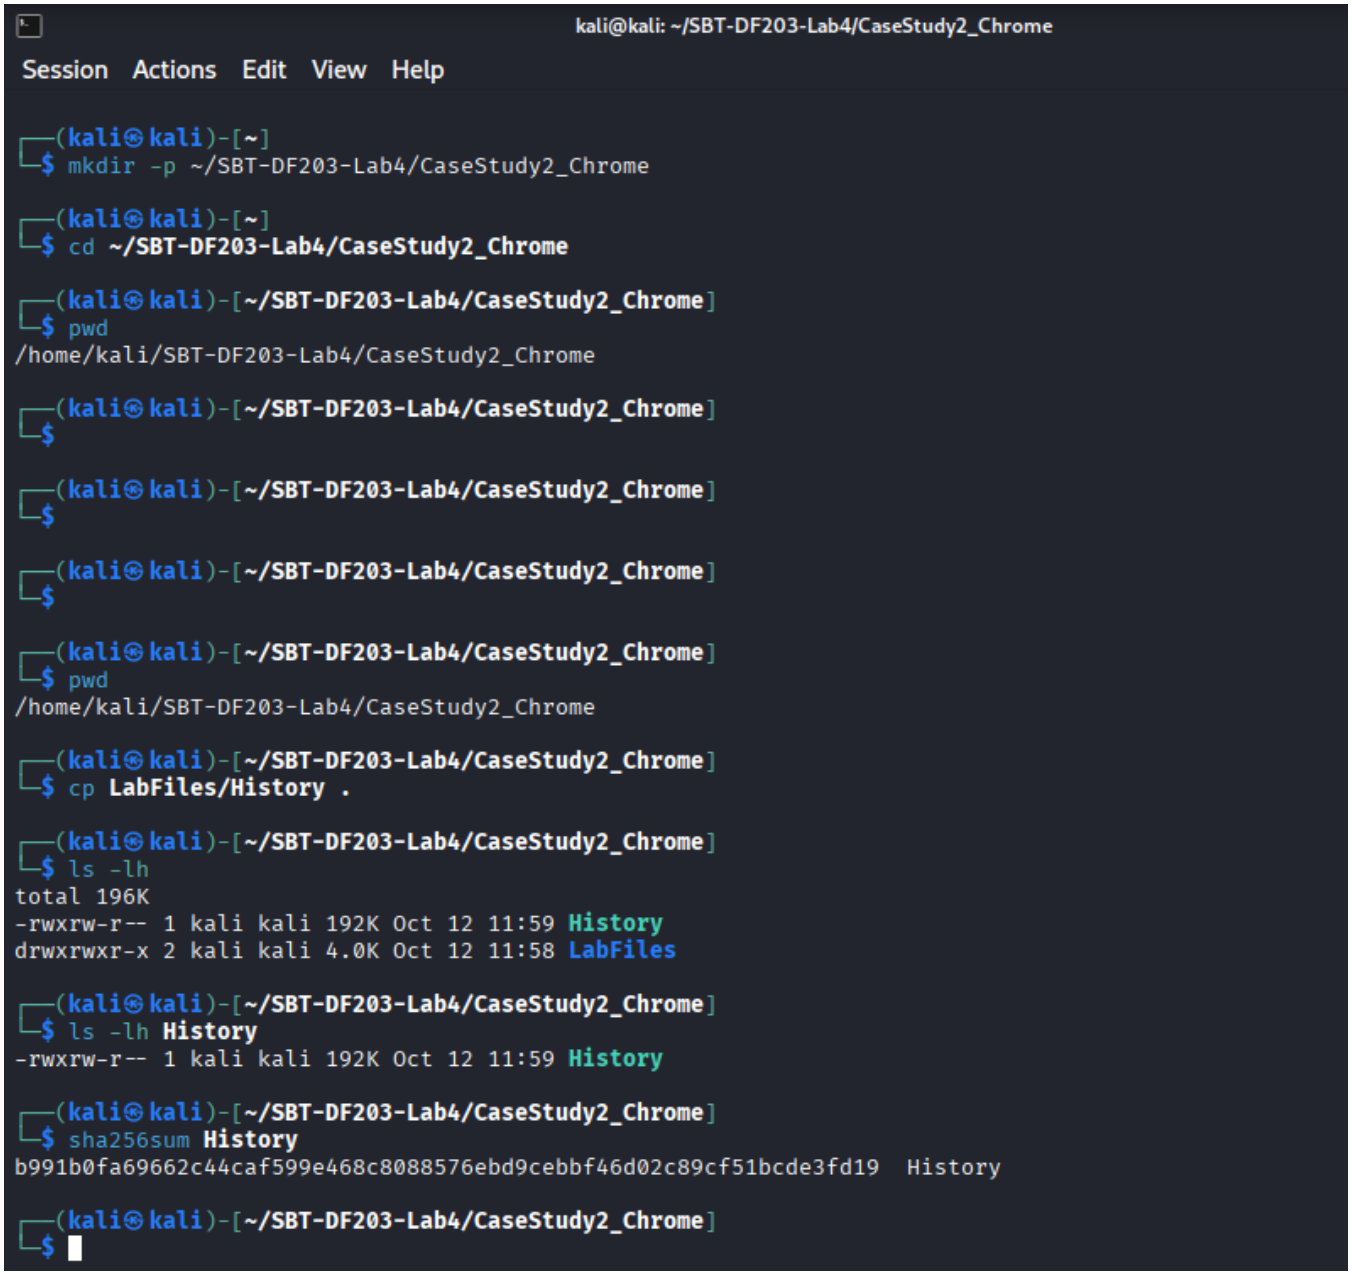

Review downloaded artefacts	`SELECT *`
	`FROM downloads`
	`ORDER BY start_time;`

Transition interpretation

Use the transition field together with from_visit. To determine the basic transition type, calculate transition AND 0xFF. The case materials demonstrate base values such as 0 for a link, 5 for omnibox-generated activity, and 7 for a form submission. Qualifier bits can indicate navigation-chain start, server redirect, or refresh behaviour. State the exact value you found and explain the interpretation you used. Do not rely on the transition value alone when the URLs, titles, and linked visits provide a different context.

Required report structure

1. Case reference and student identification. Include your full name, registration number, course code, and case title.
2. Executive conclusion. State the supported conclusion in a short, cautious paragraph. Do not treat browser-profile activity as conclusive proof of a named person.
3. Evidence acquisition and integrity. Record the History source, file name, size, hash, working-copy method, and tools used.
4. Database method. List the tables reviewed and explain your SQL, timestamp conversion, joins, and transition interpretation.
5. Findings. Answer each investigation question with record IDs, URLs or titles, timestamps, transition values, SQL output, and evidence-log IDs.
6. Timeline. Present the relevant browser sequence in UTC and distinguish the observed artefact from your interpretation.
7. Attribution assessment. State a confidence level and explain limitations, including shared-device, browser-profile, redirect, cached-content, and missing-content considerations where relevant.
8. Appendices. Include labelled screenshots, selected SQL output, the completed timeline table, and the completed evidence log.

Timeline template

Use a completed version of this table in your report or evidence appendix. Add rows for all material events.

Stage	UTC timestamp	Visit or URL ID	Artifact	Observed fact	Interpretation and limit
1. Search for Craigslist	2022-04-19 13:54:18	Visit ID 1 / URL ID 1	Google search for "craigslist"	User typed/searched for Craigslist	Indicates intentional start of activity. Does not prove the person operating the device.
2. Access Craigslist	2022-04-19 13:54:19	Visit ID 5 / URL ID 4	baltimore.craigslist.org	Navigated to Baltimore Craigslist	Starting point of the posting process.
3. Login to Craigslist	2022-04-19 13:54:22 – 13:54:39	Visit IDs 6–8	accounts.craigslist.org/login	Successful login to Craigslist account	Account was accessed. Does not prove ownership of the account.
4. Create posting	2022-04-19 13:55:05 – 13:58:22	Visit IDs 11–19	post.craigslist.org (multiple steps)	User went through “choose type → category → create posting → add map → edit image → preview → confirmation”	Clear evidence of creating a new Craigslist posting.
5. Manage / View posting	2022-04-19 13:58:27 – 13:58:31	Visit ID 20–21 / URL ID 15–16	Post ID 7473121658 titled “cheaper than Rx supplements”	Viewed the live posting	The posting was successfully created and viewed. Content of the ad is not fully visible in history.
6. Access Gmail	2022-04-19 13:58:38 – 13:59:31	Visit IDs 22–42	mail.google.com (account: unsub.fscs@gmail.com)	Logged into Gmail and opened inbox	Communication channel was accessed.
7. View / Reply to email	2022-04-19 14:04:12 – 14:05:59	Visit IDs 43–47	Email titled “cheaper than Rx supplements - order”	Opened email related to the Craigslist posting	Suggests communication with a potential buyer. Full email content is not stored in History.
8. Email with TXID	2022-04-19 14:56:47	Visit ID 48 / URL ID 37	Email containing TXID 517b2156914944339a96137ad8978408ea52b2fc144c98d3b0b16b21888afdc5	Opened email with Bitcoin transaction ID	Strong link between the posting and a cryptocurrency payment.
9. View Imgur image	2022-04-19 14:56:52	Visit ID 50 / URL ID 39	imgur.com/dTgrkP7	Visited Imgur page	Likely viewing proof of payment image.

Stage	UTC timestamp	Visit or URL ID	Artifact	Observed fact	Interpretation and limit
10. Download proof of payment	2022-04-19 ~14:57 (from download table)	Download ID 1	proof_of_payment.png (from i.imgur.com/dTgrkP7.png)	Downloaded PNG image to Desktop	Direct evidence of saving a payment-related image.

Evidence log template

Use an evidence log that lets an assessor locate the exact database record, query result, or screenshot supporting each finding.

Evidence ID	Source record	Finding	Why it matters	SQL or screenshot reference
E01	File: History	Original file size 196608 bytes, SHA-256: b991b0fa69662c44caf599e468c8088576ebd9cebbf46d02c89cf51bcde3fd19	Proves integrity of the evidence file	ls -lh History + sha256sum History
E02	visits + urls tables	Full chronological visit timeline extracted	Shows complete sequence of browser activity	Main JOIN query (timeline.txt)
E03	Visit IDs 11–21	Craigslist posting workflow for “cheaper than Rx supplements” (Post ID 7473121658)	Evidence of creating and managing a suspected advertisement	Timeline query rows 11–21
E04	Visit IDs 22–47	Gmail login to unsub.fscs@gmail.com and emails about the posting	Evidence of communication related to the posting	Timeline query rows 22–47
E05	Visit ID 48 + Download ID 1	Email containing Bitcoin TXID + download of proof_of_payment.png from Imgur	Links the posting to cryptocurrency payment and saved proof	Visit 48 + SELECT * FROM downloads
E06	Visit IDs 53–71	Blockchain.com + Kraken activity on the same TXID	Evidence of verifying and managing a crypto transaction	Timeline query rows 53–71
